How wonder products, Plant Enzymes and Sterol Max, work

By AZOMA CHIKWE

Two miracle products, Plant Enzymes and Sterol Max, developed by Ronald Schneider, an American, have been licensed by NAFDAC and are now on sale in Nigeria. The products are effective in the management of most viral infections and other degenerative diseases.

Schneider, a 2001 nominee for the Nobel prize on Medicine and Science, explains how Plant Enzymes works: "With great enthusiasm, let me tell you what Plant Enzymes does for diseases and illnesses. The Enriching Gifts International Plant Enzymes supports the body, and most importantly, the immune system by cleansing the blood stream of floating immune complex proteins that dog and suppress the activity of all the different immune system cells, the white blood cells, T-cells, antibody cells, lymphocytes, leucocytes, and all other immune system cells.

"The Enriching Gifts International Plant Enzymes support and cleanse the body of excessive toxins and toxic build up within the tissues, organs, and circulatory vessels. It also reduces inflammation greatly by breaking down the fibrinogen proteins that cause inflammatory responses. This means better metabolic functioning and oxygenation of the blood and better energy levels with healing to the individual."

Schneider's outfit is called Plant Enzyme Research Consortium LLL, based in Miles City, Montana, U.S.A, and it is represented in Nigeria by Dr. J. Ahmed and Dr. G.A Akilo of Good Tidings Hospital, Fashoro, Surulere, Lagos.

The second product is called Sterol-Max, and it was developed as a result of Schneider's visit to South Africa. It is a blend of natural plant sterols and glycosides, and clinical research shows that the product improves the ability of the immune systems T-cells to function much more effectively and more actively because of enhanced communication capabilities by the cell.

Schneider says: "One's health is determined only by how efficiently the immune system functions. If the immune system is slow and sluggish, or suppressed, the person will become prone to disease, illness and a poor quality, short life. On the other hand, someone with a healthy and very active and balanced immune system will have a long, healthy, disease-free life. This is a known and accepted fact by scientists and doctors alike all over the world."

A combination of Sterol-Max and Plant Enzymes to treat AIDS patients in South Africa, produced wonderful results. Says Schneider: "Side effects from the disease and the

symptoms of HIV and AIDS started to diminish very quickly. The immune system became very active, whereas initially, there was a very broken down and suppressed immune system cell activity."

The two products have been approved for human consumption by the Food and Drug Administration in America, as well as NAFDAC. Dr. J. Ahmed, who represents Schneider African, say: "We can safely deduce that enzymeless diets are responsible for many of humanity's ills including the shortening of lives. Most degenerative diseases are prompted by lack of enzymes."
