## Hall And The Nigerian Enzyme For HIV Cure

BY OGHOGHO OBAYUWANA

**T**HE ravaging HIV/AIDS pandemic that has killed millions worldwide is gradually being derobed of its toga of incurability by physicians who combine rare qualities of naturopathy research beyond mere homeopathy.

One of such physicians is Dr. James Hall, former President Bill Clinton goodwill ambassador on HIV/AIDS whose miracle formula -3H platinum, recently certified for use in Nigeria by the National Agency for Food and Drugs Administration Control (NAFDAC) may well lead to the complete demystification of the Human Immuno Deficiency Virus.

What is more, his cure enzyme was taken from a Nigerian plant in 1986, leading credence to the postulation by a school of thought that the Federal Government could have done better in encouraging the improvement of researches of earlier Nigerian claimants rather than outright condemnation or subtle ridicule which these practitioners were subjected to.

But now attention must be paid to Dr. Hall's formula if not for anything but for its "Nigerianness."

The physician who has been globe-trotting in educating dignitaries about the possibility of arresting HIV and decimating cancer and diabetes will come to the country to formally present the medicine which has been in use now in Nassarawa, Benue and Kogi states, to the Nigerian public.

What therefore are enzymes? How does the 3H platinum arrest HIV? What edge does it have over the formula that the American government endorsed it ahead of time?

Answers to these and many more are put on the Internet by Trylife overseas (Dr. Hall's medicine patient name).

Enzymes are the very literal "life fore" of every bodily function, which scientists say are very essential for health. We simply must have them! Without them, the body cannot continue.

So? Dr. Hall is demonstrating the complete over-powering mechanism of 3H platinum enzymes on contacting the HIV virus, stressing that HIV cure rests on enzymes.

Further information on the website rates the enzymes platinum for its capacity to get the body's immune system to be re-directed for the benefit of those dysfunctional facts or complications that will not allow the body to function correctly.

Essential Secretions: Available ingredients are: African sunflower, wild barley, lupines, fenugreek, soyabean, wheat oil seed and sterols.

This wonderful combination takes accurate account of allowing the two most important components in the body for curative purposes (kidney and liver) from being destroyed.

At present, research has revealed that the (GR8CF - 77JBH) enzymes and its different minerals formulation is a major and exciting breakthrough for enhancing the immune system to function more efficiently especially for the so-called T. helper cells and the overall macrophage activity.

In Hall's covering brief on the potency of enzymes in arresting the HIV and bringing the body's immune system back to life, he said: "Further investigative research shows to us that the formulated product because of its proteolytic complex mixture of the GR8CF-77JBH proprietary blend formula has been shown to demonstrate the ability to increase the activity of the macrophage cells by as much as 1300 per cent; more active in clinical trials by breaking down the immune complex potentials that clogs up the cells receptor sites, thereby dramatically increasing the communication of the cells own ability to perform specific immune tasks efficiently."

The expectation is that in no time, the enzyme breakthrough will be seen as especially beneficial to the people in Third World countries that cannot afford proper and/or adequate nutritional habits as a way of life.

Of course, Nigeria is one of these countries. The danger of HIV is more real in

Nigeria now than ever before.

The country has passed the critical threshold of five per cent prevalence while the number of cases has the potential of escalating rapidly in the coming years.

A recent report of the National Intelligence Council named Nigeria alongside China, India, Russia and Ethiopia as one of the five "next wave" countries that could double or triple the number of global HIV/AIDS cases by 2010.

Efforts to introduce 3H platinum in Nigeria have been on for quite some time now. Responding to *The Guardian* enquiry, Mr. Joseph Enahoro, president Trylife Incorporated, Africa said, "We were awaiting the final clearance by NAFDAC even though test administrations were being carried out in Nassarawa and Kogi states, now we hope to expand administration beyond these two states."

In August this year, no fewer than 10 medical personnel were sent by the Nassarawa State government to Atlanta, Georgia, USA for simulation training on the proper way of treating and handling the administration of 3H platinum on a patient infected by the deadly disease.

The training actually got off in September following the mass rejection of ARD commonly in use in part of the country where there has been an upsurge of the disease lately.

Enahoro said: "Scientific research is bringing both a brighter scope on arresting the spread of this deadly virus and what Trylife Incorporation, USA is doing now is to assist in making the miracle formula cheap to the common man and woman in America and in the continent of Africa with Nigeria being the pivot." Such is the hope that Hall seeks to raise in Nigeria.

Ordinarily, promoters of Trylife range of medicare agree with scientific findings that deadly virus and diseases are formed from the body not being able to properly clause non-digestible processed food by and through the immune system.

But they maintain that 3H platinum formula allows the immune system to be re-directed in 30 minutes.

The real blood T cells can be regulated by 1,300 per cent and the white T cells by 750 per cent, same percentage for viral hopes, creating a new and clean immune system to fight off infections and diseases.

The latest fact sheets in Trylife bulletin made available to *The Guardian* in Abuja and penned by Hall himself described the inroad made into Nigeria so far by the Trylife medicine as *clipboard of understanding*.

It starts like this: "The task has led to a success story following investigative studies and usage of alternative products that is making miraculous headway in restoring the positive activities within the centralised cavity of the immune system that gives hope to new face for HIV/AIDS and good health for other degenerative diseases globally."

Hall's revealing account went further: "The finding was made a reality while travelling on the soil of the continent of Africa (Abuja, Nigeria). This journey started in the Federal Capital Territory and continued to Benue State, which is the highest populated area among the states of HIV/AIDS. The Commissioner of Health and Human Services, Dr. Innocent Okama handled the Benue project. This site was more than the naked eyeball could conceive. The miraculous testimony was; there was a female patient HIV positive who was confined to the bed but after having a full daily dosage of 3H platinum administered to her as suggested, an amazing discovery was revealed.

The project continued in Nassarawa State "where HIV/AIDS patient was bound by wheel chairs. After physically viewing the patient and administering the enzymes formulated product, it was the following day that the team returned with Dr. J.O. Ogbere, chief medical

Hall

director of Nassarawa State Specialist Hospital in Lafaji and found the patient sitting up in her bed alone. The discovery came as a result of the use of the product after he had not been able to digest and or release intake of her food liquids and medications after a period of two days."

With the above scenario, Trylife health is maintaining that the clipboard of understanding has achieved a solution that has an attainable solution for the arrest of HIV/AIDS from rapidly spreading and redirecting the functions of the immune system relationship with other degenerative diseases.

In his conclusion, Hall said, "This trip to the soil of Nigeria has established a clarity and hope in the eyes of the common man, woman, political personalities, presidential (cabinet members) and religious leaders alike.

And that the formulation is more applicable to the behaviour of the immune system so that the human interior can regenerate, reactivate and especially demonstrate that the body can survive adequately and properly by enhancing the body without allowing extremely high levels of pharmaceutical compounds/combinations into the immune system."

It has been established now that the common mistake most claimants make is being in a hurry to shout about a cure to HIV. Hall appears to have taken his time going through rigorous multi serial tests since 1986; (NAFDAC's being the last in Nigeria).

And he agrees: "It takes time to perfect HIV medicine without side effects because of the deceptive nature of the virus but now there is no more fear. I want the product to be sold only by doctors in Nigeria. You have to buy through somebody in the medical field," he added.

READY, STEADY?
