

The Answer for HIV-AIDS Around the World

By: Ron Schneider
2001 Nobel Prize Nominee

HIV-AIDS, the mere mention or uttering of the words scares and terrifies most people around the world. It brings images to the mind of unimaginable suffering and a certainty of slow, but inevitable agonizing death, A.I.D.S. and H.I.V. is of epidemic proportions world wide today. Over forty million people are affected with this deadly disease world wide. The main stream medical community sees no slowing down or end in sight for the spread of this disease. Most people of the world suffer from A.I.D.S. and H.I.V. because a lack of funding for education and proven effective treatments that are known today. The treatments I am referring to are not pharmaceutical drugs, cocktails, or immunosuppressive drugs either. There is a low cost, yet very effective supplement source from Plant Enzymes and Plant Sterols.

Well, that was years ago, today in 2009 there is hope and most definitely relief available by using enzymes and sterols which are natural products that have been found to be very effective against the fight of H.I.V. and A.I.D.S.

A recent breakthrough in research and clinical trial testing has brought forth a potential for complete arrestment and alleviation of symptoms for the people suffering around the world with H.I.V. and A.I.D.S. But the most exciting aspect to this new research and clinical testing is the new formulations. These new formulas have shown a tremendous ability to potentially prevent virtually all or at least most viral infectious diseases and illnesses such as malaria, dengue fever, H.I.V., A.I.D.S., hepatitis and even the common flu virus that mutates and spawns new strains each year. This formula was exclusively developed by PLANT ENZYME RESEARCH CONSORTIUM LLC in North America. Plant Enzyme Research Consortium LLC is owned by Ron Schneider.

Premia Naturals is the EXCLUSIVE Distributing Company (also solely owned and operated by Ron Schneider) for the Digestive Aid plant enzymes formula. Mr. Schneider says “a trade secret formula in this case better protects my formula from being duplicated unauthorized because all of the ingredients in the plant enzymes formula are exclusively available only to P.E.R.C. This means no one can duplicate this formula. The name brand under which the authentic formula is exclusively sold is Premia Naturals “Digestive Aid”. The importer and sole distributors in Africa and Nigeria is Dr. A.J. Amed for the product line.

For the Research and Clinical trial testing of Premia Naturals Digestive Aid Plant Enzymes product, Mr. Schneider says strongly “I don’t want to mislead or misrepresent to people that this product will CURE or TREAT any disease or illness, because it doesn’t. Instead let me tell you all with great enthusiasm what it does do for disease and illness.” The Digestive Aid Plant Enzymes Product Supports the body, most importantly the Immune System cell functioning. It does this by cleansing the blood stream of Floating immune Complex proteins that clog and tremendously suppress the activity of all the different immune system cells, i.e. white blood cells, T-cells, Antibody Cells, Lymphocytes, Leucocytes, Macrophage’s and all the other immune System Cells.” In fact, in Clinical Research tests by Mr. Schneider and associates, the formula has demonstrated the ability to directly influence the Macrophage Cells and T-cells

to activate up to 1300% more active within one hour after oral ingestion of the Enzyme Capsules. Overall the other White Blood Cells will increase in activity as much as 500% ingestion of the Enzyme Capsules. This can be observed and demonstrated using the latest in Phase Contrast Dark Field Technology in the use of the Dark field microscope. With a much stronger and more active immune system, the bodies own natural functioning of the immune system will cure the body of disease and illness. The Digestive Aid Plant Enzymes merely support and cleanse the body of excessive toxins and toxic build-up within the bodies' tissues, organs, and circulatory vessels. The plant enzyme product also reduces inflammation greatly and quickly by breaking down the fibrinogen protein that causes inflammatory responses. The body functions much better and more efficiently and isn't so stressed out as a result of less inflammation.

This means better metabolic functioning and oxygenation of the blood and increased energy levels with faster healing to the individual. From Premia Naturals there is also another product formulation that is the second key to the effective functioning of the immune system. This product is called Immune Boost, Immune Boost plant sterols was researched and developed as a result of Mr. Schneider visiting the Natal Medical Center in Natal, South Africa. Mr. Schneider's meeting with Nelson Mandella and many other African presidents in Johannesburg South Africa in 1999. At Natal Medical center there was a professor extensively researching at the time of Mr. Schneider's visit and was using plant sterols from the Hypoxis Potatoe (found only in South Africa) to potentially treat the deadly A.I.D.S. virus. Researchers were having some success but when the plant enzymes formula was added to the sterol mixture something amazing started happening in the patients involved in the research. By taking the new mixture of Plant Enzymes and Plant Sterols, people's side effects from the disease and the symptoms of H.I.V and A.I.D.S. started to diminish very quickly. Again in research and clinically supervised trials the immune system became very active and normal functioning again. Where as initially in the patients there was a very broken down and suppressed immune system cell activity.

Immune Boost Formula is also a trade secret blend of natural plant sterols and glycosides. In clinical research both by Ron Schneider and various professors, the plant sprout Immune Boost mixture improved the ability of the immune systems T-cells to function much more effectively and more actively because of enhanced communication capabilities by the cell. This was accomplished by eliminating the toxins and immune complex proteins that clog the receptorocytes openings and cleansing the membrane of the cells from undigested proteins in the blood stream. We have improved the capability of the T-Cells to communicate and identify with other cells of the body faster and more efficiently. The Sterol and Glycoside also cause the T-Cells and other immune system cells to proliferate and modulate much faster. Remember ones health is determined only by how efficiently your immune system functions. If your immune system is slow and sluggish or suppressed you will become prone to disease and illness. On the other hand, someone with a healthy and very active and balanced functioning immune system will have a very long, healthy, disease free life. This is a known and accepted fact by scientists and doctors alike all over the world. One final note of Immune Boost, because of the way we manufacture and stabilize sterols and glycosides we are able to maintain all the natural co-factor components needed for the product to be effective. Virtually all other company's sterol products have these necessary co-factor nutrients destroyed. In Plant Enzyme Research Consortium LLC's exclusive manufacturing and stabilizing processes maintains 100% of the natural co-factor nutrient base in its Immune Boost plant sterols product. PERC has conducted research using the Plant Enzymes Digestive Aid and Plant Sterol Immune Boost mixture on over 50,000 people world wide to date with very promising and positive results. We are all very

excited with the prospects and findings of this recent research.

Over the past five years the possibility of alleviating H.I.V and A.I.D.S. from the world has been ignored by lack of funding for further research. There are highly effective products available for the use against deadly diseases and illnesses such as H.I.V. and A.I.D.S exclusively through Premia Naturals, which has now received N.A.F.D.A.C. (National Agency for Food and Drugs Administration Control) approval from the Nigerian Government to begin importing and distributing the Digestive Aid Plant Enzymes and Immune Boost Plant Sterols product for the use against H.I.V. and A.I.D.S. in Africa. Premia Naturals is now importing and marketing to the people of Nigeria and all of Africa the Digestive Aid Plant enzymes and the Immune Boost products through Dr. A.J. Amed and associates of Abuja and Lagos Nigeria. The Digestive Aid Plant Enzymes and Immune Boost Plant Sterols formulas has also been approved for human consumption by the F.D.A (Food and Drug Administration) in America. The registration and approval codes of these products are available to regulatory authorities only upon request from P.E.R.C.
